

Software Development for Drones (m/f/d)

We are looking for motivated students that want to join us in developing software for drones written in C++. While your job is mainly software development, you will also get in touch with some hardware: real drones that fly!

There are many areas to work in, for example:

- Autopilot software using [PX4](#)
- Simulation of drone flights using [AirSim](#) or [PegasusSimulator](#)
- Software for [Simultaneous Localization and Mapping](#) solutions

If that sounds good to you, write us a message and come by for a coffee.

Supervisors: [Christian Vielhaus](#), [Johannes Hofer](#)
